

Maintenance

To keep your blades in best condition, please pay attention to the following maintenance hints:

Cleaning your blades

Remove the set screw (turn left) and the spring

Push the upper plate out of the black guide conduct

Remove hair using soft brush/tissue

Oiling your blades

Put some oil (3-4 drops) onto the lower plate

Assemble the upper plate and put the screw in

Adjust the pressure as needed for a good cutting performance by tightening or loosening the set screw
